

VisNet® Connect

Automated connection pricing for medium and high voltages.

How it works

As the market increasingly demands rapid access to accurate cost information generate medium-voltage (eg 11 kV) cost estimates and quotes in just minutes.

The software supports new demand connections up to 2.5MVA, with the automated estimates and connection offers based on the precise information provided by each customer.

Customers can quickly see network location, available capacity and historic connection price ranges in the capacity map for easy optioneering. They can provide more detail for a budget price estimate or connection offer. Staff can see detailed asset capacities and produce offers in minutes rather than hours.

Benefits

- Intuitive, easy-to-use web application with drawing tools and integrated guidance
- Accuracy at speed. Users can quickly choose own site location, point of connection and cable route
- Instantly produce the connection price (inc. categorisation), plan drawing and indicative timeline
- Comprehensive pricing based on required electrical components, ground-types and traffic management.
- Network thermal and voltage capacity assessments including "N-1" alternative running
- Fully automate connection offers, trusted up to 1MVA
- Fully automate budget price estimates, trusted up to 2.5MVA
- CRM system integration for streamlined workflows
- Automatically generate correspondence, including quote letters (optional).
